

Frontend Explained Simply

What you see in the showroom - No technical words

What is Frontend? (The Showroom You See)

Frontend is what you see and touch on phone/laptop - like the shiny showroom. We designed it like a luxury Aston Martin showroom: dark green colour (#1B6157), big car photos, simple elegant text, smooth animations. Everything you click is frontend.

Pages We Built (7 Rooms)

1. Home Page (index) - Big car photo, 'Drive the Exceptional', 3 steps, brand logos (Maruti, Hyundai etc.), featured cars.
2. Cars Page (vehicles) - See all 28 cars. Filter by Brand (Maruti etc.), Fuel (Petrol/Diesel/Hybrid), Price (under 10 lakh etc.), Status (Available). No typing needed, just dropdowns.
3. Car Detail Page - Click any car to see its engine, mileage, price in rupees, colours, and book test drive (pick date, time slot, showroom auto-shown).
4. Login/Register - To book, you must login. Two buttons: User and Admin (Admin needs secret code 1234, but we don't show the code on screen).
5. User Dashboard - After login, you see your bookings: Total, Pending, Approved, Completed in green boxes. Each booking shows if admin said 'Congratulations' or 'Sorry, slot full'.
6. Admin Dashboard - Admin sees how many people booked, how many pending approvals, charts. Can approve/reject with a popup window where they type a message.
7. Plus small animations: Car logo with ATDP fades in for 1 second only on home page first time you visit.

How You Use It - Simple Story

You open site -> see cars -> filter to see only Maruti Petrol under 10 lakh -> click Swift -> pick tomorrow 9am -> if not logged in, it asks to login as User or Admin -> after login, confirm -> go to Dashboard -> see 'Pending - Awaiting admin approval' -> later admin approves -> your dashboard changes to green 'Approved' with message 'Please arrive 15 mins early'.

Design Magic We Added

Hover effect: When you move mouse on 'Three Steps' boxes, they turn green (brand colour). Contact section at bottom is also green to match. Logos for each car brand are stored inside the website itself so they always load, not from internet. Prices always in Indian Rupees, on-road Navi Mumbai rates taken from real CarDekho/ZigWheels.

Why It Matters

Frontend makes it easy and beautiful. Without it, backend is just numbers. Frontend hides complexity: you just click dropdowns, pick date, and book. It also stops mistakes: won't let you book past date, shows only free slots, forces login before booking.
