

Full Project - Layman Guide

Frontend + Backend Together in Simple Words

The Big Idea

We made a website for Navi Mumbai where you can see 28 cars (Maruti to Mercedes, price Rs 8.99 lakh to 68 lakh) from 10 local showrooms and book a test drive online. No need to visit shop first. Admin can approve or reject with a personal message.

Frontend = Showroom (What You See)

See above Frontend sections: 7 pages, green luxury design, filters by brand/fuel/price, booking calendar, dashboards with green boxes, popup for admin, local logos, rupee prices.

Backend = Kitchen (What Works Behind)

See Backend sections: Store room with 5 cupboards, login check, auto showroom finder, no double booking, 9 time slots, admin messages.

Together

You click 'Book' on frontend -> frontend asks backend 'Is this slot free?' -> backend checks kitchen store room -> replies Yes/No -> frontend shows result. Green design ties both sides together: dashboards, contact footer, hover steps all green #1B6157.
